### **Banyan Medical Systems Adds Ultra High Resolution Monitor to Solution**

**Omaha, NE** (February, 2010) An 8.3 megapixel resolution monitor has been added as an optional feature of Banyan Medical System's ControlOR™ solution. ControlOR is a software based integration solution used by medical professionals in hospital O.R.s or angio suites to simplify access to and interaction with patient information.

At 3840 x 2160, the ultra-high resolution 56" diagonal monitor features four times the resolution of a full high definition panel. Displaying quad high definition (HD) digital content, combined with an integrated high-performance computer, this solution can offer extreme computing power and unparalleled visual clarity. When looking at patient imaging through ControlOR, the 8.3 megapixel can offer the most precise image analysis available.

With the 8.3 megapixel panel's features, physicians will have the ability to have diagnostic quality imaging intra-operatively, and be able to display multiple images of both previous and current studies. This will allow physicians the assurance they have the required image quality to interpret images and make the most informed decisions during critical phases of the procedure.

#### **About**

Banyan Medical Systems, Inc. is a leading-edge medical software development and integration company dedicated to creating solutions that transform healthcare professionals' ability to access and interact with patient information. Banyan's products are designed to leverage current technology investments and improve efficiencies through a scalable and flexible, dashboard-like solutions that provide physicians and other medical professionals' ubiquitous access to pertinent medical applications needed for a comprehensive patient view.
