Banyan Medical Systems Expanded Headquarters to Include Mock O.R.

Omaha, NE (February, 2010) Banyan Medical Systems (BMS) is growing its Omaha, NE headquarters location by renovating 16,000 square feet of building space.

The build out will make room for additional staff of BMS' Network Operation Center that provides proactive monitoring of BMS products, as well as room for an expanded integration testing lab and office space.

A unique feature of the build out will also entail the development of a mock operating room. BMS's lead product, ControlOR™ is a software based integration solution used by medical professionals in hospital O.R.s or suites to improve access to and interaction with patient information. The mock room will be a state-of-the-art operating room designed to showcase the features and benefits of Banyan Medical Systems products, such as ControlOR.

"We are continually striving to stay ahead of our needs to ensure the highest quality service for our customers" says President Tony Buda regarding the Network Operation Center. "Potential customers are normally blown away the first time they see a demonstration of our software just in an office setting. Being able to see the software function in an everyday setting of an O.R. will help them further visualize and tie together the extraordinary number of applications and benefits ControlOR has for customer workflows."

The renovation is expected to be completed in May of 2010. Banyan Medical Systems is located at 4106 South 87th Street in Omaha.

About

Banyan Medical Systems, Inc. is a leading-edge medical software development and integration company dedicated to creating solutions that transform healthcare professionals' ability to access and interact with patient information. Banyan's products are designed to leverage current technology investments and improve efficiencies through a scalable and flexible, dashboard-like solutions that provide physicians and other medical professionals' ubiquitous access to pertinent medical applications needed for a comprehensive patient view.
