The University of Kansas Hospital Electrophysiology Lab to Utilize ControlOR™ Software

Kansas City, KS (August, 2011) The University of Kansas Hospital, has selected Banyan Medical Systems as the integration vendor for their new combination cath/electrophysiology lab. Banyan Medical Systems has also implemented the ControlOR software into general operating rooms, cardiovascular operating, hybrid OR rooms, and interventional radiology suites across the Midwest.

In the electrophysiology lab, various procedures and treatments occur for patients with abnormal cardiac rhythm. These procedures range from implanting devices to various types of ablations - all which require several sources of information, such as X-ray/fluoroscopy, ultrasound, hemodynamics, PACS, cameras, mapping systems, recording systems, in order for the physician to have a comprehensive view and understanding of the patient's condition.

ControlOR, a software based integration solution, can integrate disparate sources of information, such as those in the EP lab, into a single interface providing an Electrophysiologist and medical staff in the lab seamless access and interaction with these data sources in order to make the best possible decisions for a patient's care.

In addition to ControlOR, the BMS solution will also feature a Banyan eight (8) megapixel ultra-high resolution monitor of diagnostic quality. This monitor features four times the resolution of a full high definition panel and can display high definition (HD) digital content for extreme visual clarity and the most precise image analysis available for the physicians during a case.

For more information about ControlOR, or Banyan Medical Systems, please call (402)403-4400.

About

Banyan Medical Systems, Inc. is a leading-edge medical software development and integration company dedicated to creating solutions that transform healthcare professionals' ability to access and interact with patient information. Banyan's products are designed to leverage current technology investments and improve efficiencies through a scalable and flexible, dashboard-like solutions that provide physicians and other medical professionals' ubiquitous access to pertinent medical applications needed for a comprehensive patient view.
