ControlOR™ Live in New Cardiovascular Suites

Omaha, NE (April 19, 2010) Four newly remodeled cardiovascular surgical suites at Alegent Health Bergan Mercy Medical Center in Omaha went live with ControlOR.

ControlOR has been implemented in general operating rooms, spine/neurological ORs, and in an interventional radiology suite, but this marks the first use of Banyan Medical Systems' software based integration system in a cardiovascular environment in the United States. ControlOR brings together disparate information including applications, video sources, and room controls all into a single interface. Surgeons and OR staff can access and interact with all of this data during surgical cases thereby having comprehensive patient information in order to make the most informed decisions possible for patients.

"Banyan's solution will enhance our workflow. This is technology we have not had in the past — the ability to display multiple systems on one flat screen will allow us to move quicker through the cases. This technology also allows the team to stay into the cases with the new visual capabilities," says Tim McBride, Leader of Cardiovascular Surgery at Alegent Health Bergan Mercy Medical Center.

Another key reason that Bergan Mercy chose ControlOR was for its expandability to incorporate new OR technologies as their environment changes and as users see the full potential and impact that ControlOR can have to their current workflows.

Alegent Health Bergan Mercy Medical Center is also currently integrating six additional general operating rooms with ControlOR.

About

Banyan Medical Systems, Inc. is a leading-edge medical software development and integration company dedicated to creating solutions that transform healthcare professionals' ability to access and interact with patient information. Banyan's products are designed to leverage current technology investments and improve efficiencies through a scalable and flexible, dashboard-like solutions that provide physicians and other medical professionals' ubiquitous access to pertinent medical applications needed for a comprehensive patient view.
