## **Alegent Health Bergan Mercy Medical Center Selects Banyan Medical Systems for Cardiovascular Suite Integration**

**Omaha, NE** (September, 2009) Banyan Medical Systems (BMS) announces that Alegent Health Bergan Mercy Medical Center has chosen BMS's ControlOR for integration of four new cardiovascular suites. ControlOR is a software based, integration solution that delivers maximum efficiency to the operating suite by simplifying information access and interaction, thus, providing a complete patient view and allowing providers to make the most informed decision at a crucial time in a patient's care.

ControlOR provides surgeons control and access to all the information collected about a patient from initial visit to surgery, even if the data was collected at the surgeon's practice. Also, it provides the opportunity to collaborate with other physicians without leaving the sterile field therefore, reducing chance of infection, error, and anesthesia time, and saving case time.

"Banyan's solutions will enhance our workflow. This is technology we have not had in the past — the ability to display multiple systems on one flat screen will allow us to move quicker through the cases. This technology will also allow the team to stay into the cases with the new visual capabilities," says Tim McBride, Leader of Cardiovascular Surgery Department at Bergan Mercy.

In addition to simplifying information access, ControlOR was designed with maximum flexibility and scalability in mind to allow hospitals to leverage and maximize their current investments to help protect those investments from obsolescence.

### **About**

Banyan Medical Systems, Inc. is a leading-edge medical software development and integration company dedicated to creating solutions that transform healthcare professionals' ability to access and interact with patient information. Banyan's products are designed to leverage current technology investments and improve efficiencies through a scalable and flexible, dashboard-like solutions that provide physicians and other medical professionals' ubiquitous access to pertinent medical applications needed for a comprehensive patient view.
