Omaha, NE (January, 2011) Banyan Medical Systems is pleased to announce the release of ControlOR™ version 1.12.

ControlOR is a comprehensive, software-based integration solution that brings together video, IT applications, room controls and collaboration into a single, intuitive user interface. ControlOR can leverage existing resources, regardless of vendor, in operating rooms, hybrid rooms, interventional radiology labs and cath/EP labs.

New product components and enhancements that will be available to customers to opt for in version 1.12, and future versions of ControlOR, include:

- **Snapshot** – takes a picture of a single asset or the entire screen
- **Record** – records what is being viewed within ControlOR during a case
- **Media Review** – ability to review snapshots or recordings, delete, print or rename them
- **Device Persistence Module** – allows authorized users to copy snapshots and/or recordings to a local device, portable device, remote storage device, or network folder.
- **Collaborative Annotations** – ability to bi-directionally share annotations with remote users
Collaborative Pan/Zoom - ability to bi-directionally view/alter the zoom factor between remote users
- **Open Case Function** – browse to an existing case saved to a device or network folder
- **Close Case Function** – closes all assets, snapshots, recordings and “cleans the slate” for a new case
- **Remote Session Gateway** – Ability to view or control a device remotely that has the RSG server loaded
- **XP Service Pack 3 Compatibility** – ability to run on panels and PCs running XP Service Pack 3
- **HOS “Group” Functionality** – allows multiple clients and/or rooms to share a common ControlOR server in order to control, save and limit data based on Group assignment.

*(*for more detailed release notes, please contact a Banyan Representative)*

At its core, ControlOR offers functionality above and beyond a typical video-based integration system. Many of the new features available to ControlOR such as snapshot, record, and collaboration improve the ability for physicians to communicate and share rich content with other physicians, review boards, and patients and patients’ families, all of which are nearly impossible with a traditional, video-based system.

For more detailed information about ControlOR or the new available features, please contact Banyan Medical Systems at (402) 403-4400.

About

Banyan Medical Systems, Inc. is a leading-edge medical software development and integration company dedicated to creating solutions that transform healthcare professionals' ability to access and interact with patient information. Banyan's products are designed to leverage current technology investments and improve efficiencies through a scalable and flexible, dashboard-like solutions that provide physicians and other medical professionals' ubiquitous access to pertinent medical applications needed for a comprehensive patient view.
