Banyan Medical Systems Builds Custom Order and Transport Module for GIKK Ortho Specialists

Omaha, NE (April 2009) Banyan Medical Systems (BMS) has been selected to integrate its Corridor™ software platform, including a custom x-ray order and transport module, for GIKK Ortho Specialists (GIKK). Corridor efficiently provides data to physicians and healthcare providers by bringing together IT applications, modalities, and medical devices into a single point of access thus providing a complete patient view and enabling providers to make the most informed decisions for care.

GIKK Ortho Specialists, a private orthopaedic practice, will leverage Corridor for the time efficiencies it can bring to the practice's workflow. Corridor, along with BMS's custom x-ray order and transport system, will streamline the time between diagnostic interpretation and patient consults.

Corridor's custom x-ray module will allow physicians, or physicians' nurses, to electronically order and call for x-ray transport directly and instantaneously from the patient room. Within seconds, the call for x-ray will directly appear on a transport person's handheld device and in the x-ray technician's workflow screen in the X-ray Department. Several minutes will be saved on communication and waiting for transport of the patient by use of the ordering and transport module.

To help maximize the physician's time and enhance communication with patients, Corridor will also enable GIKK's orthopaedists to view and interact with patient information just as if he or she were signed in at a physician workstation. The physicians' credentials and viewing preferences from the workstation will automatically load when a physician nears the PC based monitor in the exam room by way of a proximity card. GIKK physicians will then be able to quickly and easily manipulate and show patients high resolution images of their injury or condition improving communications with patients regarding their course of treatment.

About

Banyan Medical Systems, Inc. is a leading-edge medical software development and integration company dedicated to creating solutions that transform healthcare professionals' ability to access and interact with patient information. Banyan's products are designed to leverage current technology investments and improve efficiencies through a scalable and flexible, dashboard-like solutions that provide physicians and other medical professionals' ubiquitous access to pertinent medical applications needed for a comprehensive patient view.
