Orthopedic Practice Expanding Use of Corridor™

Omaha, NE (August, 2010) GIKK Ortho Specialists is adding Banyan Medical Systems' Corridor™ software to nineteen patient rooms currently being remodeled and upgraded at its central Omaha office. Corridor is currently being utilized in twenty-four rooms at GIKK's west Omaha office.

Corridor is a healthcare operating system that is used to integrate, manage, and interact with information from disparate systems, such as video, IT applications and controls from a single interface. Corridor links patient information together in order to provide healthcare professionals a comprehensive patient view allowing them to make the best possible decisions about patients' care.

Banyan Medical Systems created a customized version of Corridor for GIKK Ortho Specialists. In addition to the core software which allowed physicians and staff to view and interact with the practices EMR and PACS from within the patient room, Banyan developed a custom X-ray order module, marketing scheduling module, X-ray technologist worklist portal and an X-ray transport module. Previously workflow around patient X-ray was done on paper forms and a light switching system that included extra steps and phone calls by the medical staff.

Banyan Medical Systems conducted a time study of GIKK's patient workflow (with X-ray) prior to implementing Corridor, and post implementation at the west Omaha office. The implementation of Corridor enabled GIKK Ortho Specialists to reduce a patient's overall visit by four (4) minutes, but still allowed GIKK physicians to spend five (5) additional minutes consulting and interacting with the patient. The practice's workflow was improved along with the quality of care for GIKK Ortho Specialist's patients.

"Banyan was the first and only company we talked with that had the "we can solve your problem" attitude. They took our conceptual ideas and created a product that not only addressed the issue we wanted to solve, but provided even more that we had hoped for. They think outside the box and make solutions happen," said Alta Sharp, Administrator of GIKK Ortho Specialists.

About

Banyan Medical Systems, Inc. is a leading-edge medical software development and integration company dedicated to creating solutions that transform healthcare professionals' ability to access and interact with patient information. Banyan's products are designed to leverage current technology investments and improve efficiencies through a scalable and flexible, dashboard-like solutions that provide physicians and other medical professionals' ubiquitous access to pertinent medical applications needed for a comprehensive patient view.
