Banyan Medical Systems to Implement ControlOR™ at New Methodist Women's Hospital

Omaha, NE (December, 2009) Banyan Medical Systems (BMS) announces that Nebraska Methodist Health System has chosen ControlOR for integration of two general operating rooms at the Methodist Women's Hospital. ControlOR is a software based, integration solution developed by Banyan Medical Systems that delivers maximum efficiency to the operating suite by simplifying information access during one of the most critical times in a patient's care. As a result, patient anesthesia time is minimized and room utilization maximized for hospitals.

ControlOR provides surgeons control and access to all the information collected about a patient from initial visit to surgery, even if the data was collected at the surgeon's practice, thus providing a complete patient view and allowing providers to make the most informed decisions for their patients. ControlOR also provides surgeons the opportunity to collaborate with other physicians without leaving the sterile field, therefore, reducing chance of infection, error, and anesthesia time, and saving case time.

Designed with flexibility and scalability in mind, ControlOR can integrate virtually any other vendor solution and new inputs and applications can be added at will protecting a hospital's recent investments from technology obsolescence.

ControlOR delivers efficiencies that directly reduce anesthesia time (therefore, OR time and procedure costs), increase collaborative expertise for better outcomes, and place surgeons in control of information.

The new Methodist Women's Hospital will offer women a host of obstetrical, gynecological, outpatient imaging, outpatient laboratory and emergency services.

About

Banyan Medical Systems, Inc. is a leading-edge medical software development and integration company dedicated to creating solutions that transform healthcare professionals' ability to access and interact with patient information. Banyan's products are designed to leverage current technology investments and improve efficiencies through a scalable and flexible, dashboard-like solutions that provide physicians and other medical professionals' ubiquitous access to pertinent medical applications needed for a comprehensive patient view.
