Sanford USD Medical Center Interventional Radiology Suite to Implement ControlOR™

Omaha, NE (December, 2009) Banyan Medical Systems (BMS) announces that ControlOR will be integrated into an interventional radiology suite at Sanford USD Medical Center in Sioux Falls, SD. ControlOR is a software based, integration solution that delivers maximum efficiency to the operating suite by simplifying information access and interaction, thus, providing a complete patient view and allowing providers to make the most informed decision at a crucial time in a patient's care.

All the information collected about a patient from initial visit to surgery, even if the data was collected at the surgeon's practice, can be integrated and accessed through ControlOR. Also, ControlOR provides the opportunity to collaborate with other physicians without leaving the sterile field, therefore, reducing chance of infection, error, and anesthesia time, and saving case time.

Gale Wynia, Radiology Director at Sanford USD Medical Center says, "We chose Banyan because their solution allowed for real-time, touch screen interaction with multiple applications simultaneously. No other vendor has accomplished this functionality in the market. We are able to save countless, valuable minutes to ensure the most effective use of our resources."

In addition to simplifying information access, ControlOR provides maximum flexibility and scalability in order to allow hospitals to leverage and maximize their current technology investments and to help protect those investments from obsolescence.

About

Banyan Medical Systems, Inc. is a leading-edge medical software development and integration company dedicated to creating solutions that transform healthcare professionals' ability to access and interact with patient information. Banyan's products are designed to leverage current technology investments and improve efficiencies through a scalable and flexible, dashboard-like solutions that provide physicians and other medical professionals' ubiquitous access to pertinent medical applications needed for a comprehensive patient view.
