Banyan Medical Systems' ControlOR™ Software Selected at St. Elizabeth Regional Medical Center

Omaha, NE (January, 2010) Banyan Medical Systems (BMS) announces that St. Elizabeth Regional Medical Center in Lincoln, NE has chosen to implement BMS's ControlOR solution. St. Elizabeth will deploy the integration in several of its OR suites including six general/cardiovascular suites, four orthopedic, and three spine/neurological rooms. ControlOR is a software based, integration solution that delivers maximum efficiency to the operating suite by simplifying information access and interaction, thus, providing a complete patient view.

From initial visit to surgery, ControlOR provides surgeons control and access to all the information collected about a patient, even if the data was collected at the surgeon's practice. It also provides the opportunity for collaboration with other physicians without the operating physician leaving the sterile field or the collaborating physician entering the sterile field, therefore, reducing chance of infection, error, and anesthesia time, and also saving case time.

In addition to simplifying information access, ControlOR was designed with maximum flexibility and scalability in mind to allow hospitals to leverage and maximize their current investments to help protect those investments from obsolescence. The flexibility inherent in ControlOR can prevent hospitals from future costly upgrades that other hardware based solutions would require.

About

Banyan Medical Systems, Inc. is a leading-edge medical software development and integration company dedicated to creating solutions that transform healthcare professionals' ability to access and interact with patient information. Banyan's products are designed to leverage current technology investments and improve efficiencies through a scalable and flexible, dashboard-like solutions that provide physicians and other medical professionals' ubiquitous access to pertinent medical applications needed for a comprehensive patient view.
