ControlOR™ Integration Expanded at Immanuel Medical Center

Omaha, NE (March, 2010) Alegent Health Immanuel Medical Center (IMC) will be expanding the number of surgical suites that utilizes Banyan Medical Systems' ControlOR integration software.

ControlOR enhances access to patient information in the operating suite allowing surgeons a complete view of patient data in order to make the most informed decisions possible while in surgery. ControlOR differentiates itself from other vendor integration solutions by being software based, vendor versatile, and scalable and flexible to meet hospitals' growing and changing needs.

IMC currently utilizes ControlOR in two operating rooms that are focused on neurological and spine cases. As utilization of ControlOR has grown in these two inaugural rooms, so has demand from other surgeons and OR staff to have the same technology and sophistication available to them during cases. IMC will be introducing ControlOR to four more operating rooms over the next few months.

"It is an exciting, crucial step for Banyan to grow our product base within the O.R.s of current customers," says Jeff Broz, Vice President of Operations at Banyan. "It demonstrates our customers are seeing the value in ControlOR's ability to impact how they perform surgical cases."

About

Banyan Medical Systems, Inc. is a leading-edge medical software development and integration company dedicated to creating solutions that transform healthcare professionals' ability to access and interact with patient information. Banyan's products are designed to leverage current technology investments and improve efficiencies through a scalable and flexible, dashboard-like solutions that provide physicians and other medical professionals' ubiquitous access to pertinent medical applications needed for a comprehensive patient view.
